

Markit Enterprise Data Management: Commodities Transaction Management

Supporting requirements for centralised transaction management as well as the enrichment and realtime distribution of data

Markit aggregates and normalises commodity transactions across legacy systems in realtime, providing a single, consolidated view of transactions to help enhance business wide analysis and reporting.

Companies today face growing requirements around enriching commodity transactions to meet regulatory and compliance mandates. Legacy systems often lack the flexibility to collate diverse data in realtime, resulting in potential increases in operational risk and response times. Companies typically need to invest heavily on integration projects and resources to maintain and update systems to align with changing requirements.

Using our EDM platform, customers can receive commodity transaction data from multiple systems, regardless of format. We also provide technical and business validation with exception reporting that fits into customer workflows. Customers can collate, master, enrich and distribute information to required destinations in the appropriate data structure for analysis and reporting. With a consolidated view of positions, P&L and credit across commodities, geographies and entities, customers can more efficiently manage their trading activities and fulfil their compliance and reporting obligations.

Data source and destination independent

No development necessary to source or destination data structure, as structures are modelled within the EDM platform to minimise risks associated with integration projects as well as to reduce delivery time and support efficient adaptation to new requirements

Complete data lineage

Enables data to be tracked back to its raw format along with access to full audit trail of changes made to data, including visibility into enrichment and mastering workflows, for improved data governance

Ease of use

Intuitive interface enabling business users to interact directly with the data, including adding new data sources, data structures and commodities as needed, to support compliance requirements without the need for programming resources or intervention from Markit

Highly scalable

Seamless connectivity to multiple systems and locations with ability to process more than 200,000 transactions per second

200,000+

transactions per second

Rapid

time of deployment

100+

customers with 100% retention

Extensive

asset class coverage

Clients

Commodity trading firms
Utilities
Investment banks
Brokers
Exchanges
Hedge funds
