

# Desktop

Complete Cross-Asset Coverage

The background is a solid blue color with several thin, white, curved lines that sweep across the page, creating a sense of motion and connectivity. The lines vary in length and curvature, some starting from the top left and moving towards the bottom right, while others are more vertical or diagonal.

Markit Desktop enables cross-asset price discovery and analysis across OTC markets easily and quickly. It creates visibility across a broad range of sovereigns, corporates and indices, providing an unparalleled dashboard of market activity in real-time.

## Desktop Construction

### Data Feeds

Data is collected from multiple sources, including Markit and third parties

### Data Collation & Aggregation

Markit collates and sorts through data sets to deliver accurate and usable data

### The Desktop

Data is presented in an easy to use customizable interface

Markit Desktop is the premium viewer for Markit's cross-asset content covering fixed income cash and derivative pricing blended with third party data and news in a simple and easy-to-use desktop application. Used by investment, trading, risk and research participants globally, Markit Desktop saves time and produces unique perspectives in real-time tuned to an individual's needs.

The Markit Desktop can easily be set up to reflect your issuer universe by importing watchlists and viewing on the Desktop's pre-defined or your own customised screens.

# A customisable solution

## Price Discovery

Markit's data is seamlessly integrated into the Markit Desktop and provides independent pricing and reference data in order to enhance transparency, reduce risk and improve operational efficiency. It is used by institutions worldwide for pre-trade analysis, risk management, and research. In addition to Markit's own content the Desktop also includes third party data to provide a complete overview of the markets.

- A** Overview for bonds of the selected issuer, sorted by maturity date. Includes color coded liquidity scores for easy identification of liquid instruments
- B** Detail for the selected bond with fuel sources, liquidity metrics & scores plus pricing snaps across the day
- C** Terms and conditions for over 300,000 bonds are included with Markit Desktop

## Index and Constituents

Microsoft Excel integration is a core part of the desktop package, with the Markit RTD plug-in supplying data in real-time using easy to use formulas as well as drag/drop from Desktop that makes building spreadsheets quick to set up and easy to update.

Complete support and training is provided to all end users and our support portal is always on hand to help resolve any issues.

**A** Indices and their constituents. Includes current and closing price/spread, model pricing, skew and volatility

**B** Chart history which can compare different tenors, CDS to equity or other names. Also chart Curves showing historical or intraday movement

**C** Liquidity score for a given CDS including the input measures used to determine the score
